

PRAGMATIC
—INSTITUTE—

DATA SCIENCE

TEAM MEMBERS

DATA SCIENCE TEAM MEMBERS

Data Scientist

Key Responsibilities

- Cleans and organizes big data
- Solves business tasks using machine learning and data mining techniques

Languages

- Coding: R, Python, Scala
- Database: SQL
- Computing: Hadoop/Spark

Expertise

- Distributed computing (user)
- Predictive modeling
- Math and statistics
- Machine learning
- Storytelling and visualization
- Capable of working with big data

Database Administrator

Key Responsibilities

- Ensures that databases are available to all relevant users
- Data security
- System performance

Languages

- Database: SQL
- Other: Java, Python
- Distributed computing tools

Expertise

- Backup and recovery
- Database systems
- Distributed computing
- Data security
- Enterprise resource planning

Data Analyst

Key Responsibilities

- Collects and processes data
- Conducts basic statistical analyses
- Presents and explains results
- Supports more advanced/senior technical staff

Languages

- Statistical: R/SAS/Stata/Matlab
- Office tools

Expertise

- Spreadsheet manipulation and analysis
- Data visualization
- Basic math and statistics

Business Analyst

Key Responsibilities

- Serves as intermediary between business and technical teams
- Links data insights to actionable business decisions
- Uses storytelling techniques to communicate data science results to organization

Languages

- Office tools
- Tableau/Splunk

Expertise

- Knowledge of Office suite to present data science findings to management
- Knowledge of visualization tools to illustrate business problems or solutions
- Storytelling and data-driven communication
- Basic data modeling

Data and Analytics Manager

Key Responsibilities

- Manages data science team
- Prioritizes and manages data science projects
- Identifies and supports opportunities to use these skills throughout an organization

Languages

- Depends on level of technical or non-technical involvement

Expertise

- Leadership
- Project management
- Interpersonal communication
- Understanding of roles and responsibilities of teams

Data Engineer/Architect

Key Responsibilities

- Designs and implements data management systems to integrate, centralize, protect and maintain data sources
- Designs and maintains systems for data science staff to develop and put data science applications into production

Languages

- Database: SQL/NoSQL
- Distributed Computing: Hive, Pig
- General purpose: Python, Java, Perl
- Statistical: Matlab/R/SPSS/SAS

Expertise:

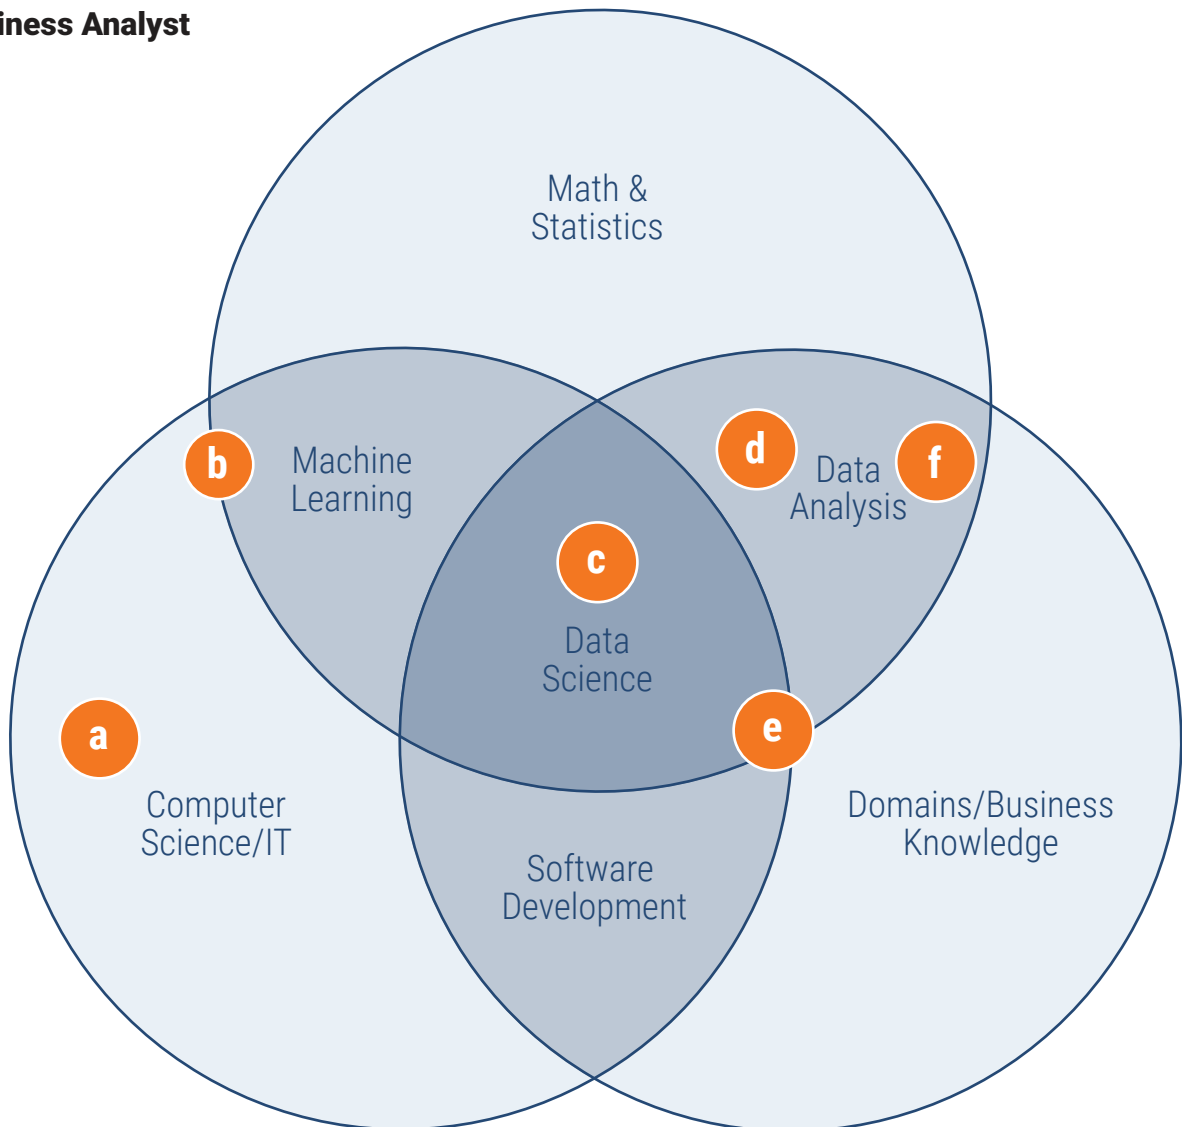

- Data warehousing
- Database architecture
- ETL tools
- Business intelligence tools
- Kubernetes/cluster management tools

DATA SCIENCE TITLES & SKILL SETS

DATA SCIENCE TITLES & FIELDS

- a. Database Administrator**
- b. Data Engineer**
- c. Data Scientist**
- d. Data Analyst**
- e. Data & Analytics Manager**
- f. Business Analyst**

Every 2 days, we generate as much data as all of humanity did up to 2003.

Make sure none of that data goes to waste with help from the data experts at Pragmatic Institute. We deliver the most relevant and in-demand curriculum to students at every point in their data science

careers. From data dabblers to PhDs and professionals looking to increase their data skills, our expert instructors provide hands-on training with the latest data science tools and techniques.
