The Business of Data Science

Who should attend?
This course is for product professionals and business leaders who want to understand how data impacts their business and anyone who works with data professionals.

Understand the Fundamentals
Learn how data can be combined with machine learning and artificial intelligence tools to enable data-driven decisions that improve your business and your products.

Topics Covered:
• Understanding the different areas of data science
• Learning about supervised and unsupervised machine learning and AI
• Translating business problems into data science tasks

Identify Profitable Data Projects
Learn the key attributes of successful data science projects, and how to identify and prioritize projects with the highest impact.

Topics Covered:
• Identifying winning data science projects
• Optimizing decision making with the 3 pillars
• Measuring success and avoiding common pitfalls

Develop a Data-Driven Work Culture
Learn how to implement data science projects into your organization and cultivate the right team.

Topics Covered:
• Defining data science roles
• Facilitating data science projects successfully
• Examining ethical and legal considerations for projects
